

## Database settings

On all the SOA/6Day computers the SQL database for AutoDownload has the following settings

The screenshot shows a dialog box titled "Modify Database Settings". At the top right, there are four icons: a question mark for "Help", a floppy disk for "Save", a trash can for "Delete", and a document for "Full". On the left side, there is a "Copy" icon. The main area contains six input fields:

Data Client:	SQL Server
Server:	robin11
Port:	1433
Database:	events
Username:	sa
Password:	••••••••

Server: is either the name of the computer, its IP address or if the database is on the computer being used for "localhost" (without the quotation marks)

Port and Username are never changed and the Database is usually "events"

The password is "orienteer"

Remember to click on "Save" before leaving this screen if you have made any changes.
